Case Study & Data Overview

During the Project-Based Internship at Bank Muamalat, I worked on a Business Intelligence case study using sales data from PT Sejahtera Bersama. I started by understanding the dataset structure, identifying primary keys, and defining relationships across Customer, Orders, Products, and Product Category tables.
I then created a master transaction table in BigQuery and used Looker Studio to visualize sales performance by product category and customer location.

Through this analysis, I aimed to identify sales patterns, top-performing categories, and key areas that could support better business decisions.

Table Name	Key Column
Customers	CustomerID
Orders	OrderID
Product	ProdNumber
ProductCategory	CategoryID

Data Preparation in BigQuery

Rakamin Academy

In this stage, I prepared the sales data in BigQuery by combining the Customer, Orders, Products, and Product Category tables into one master dataset.

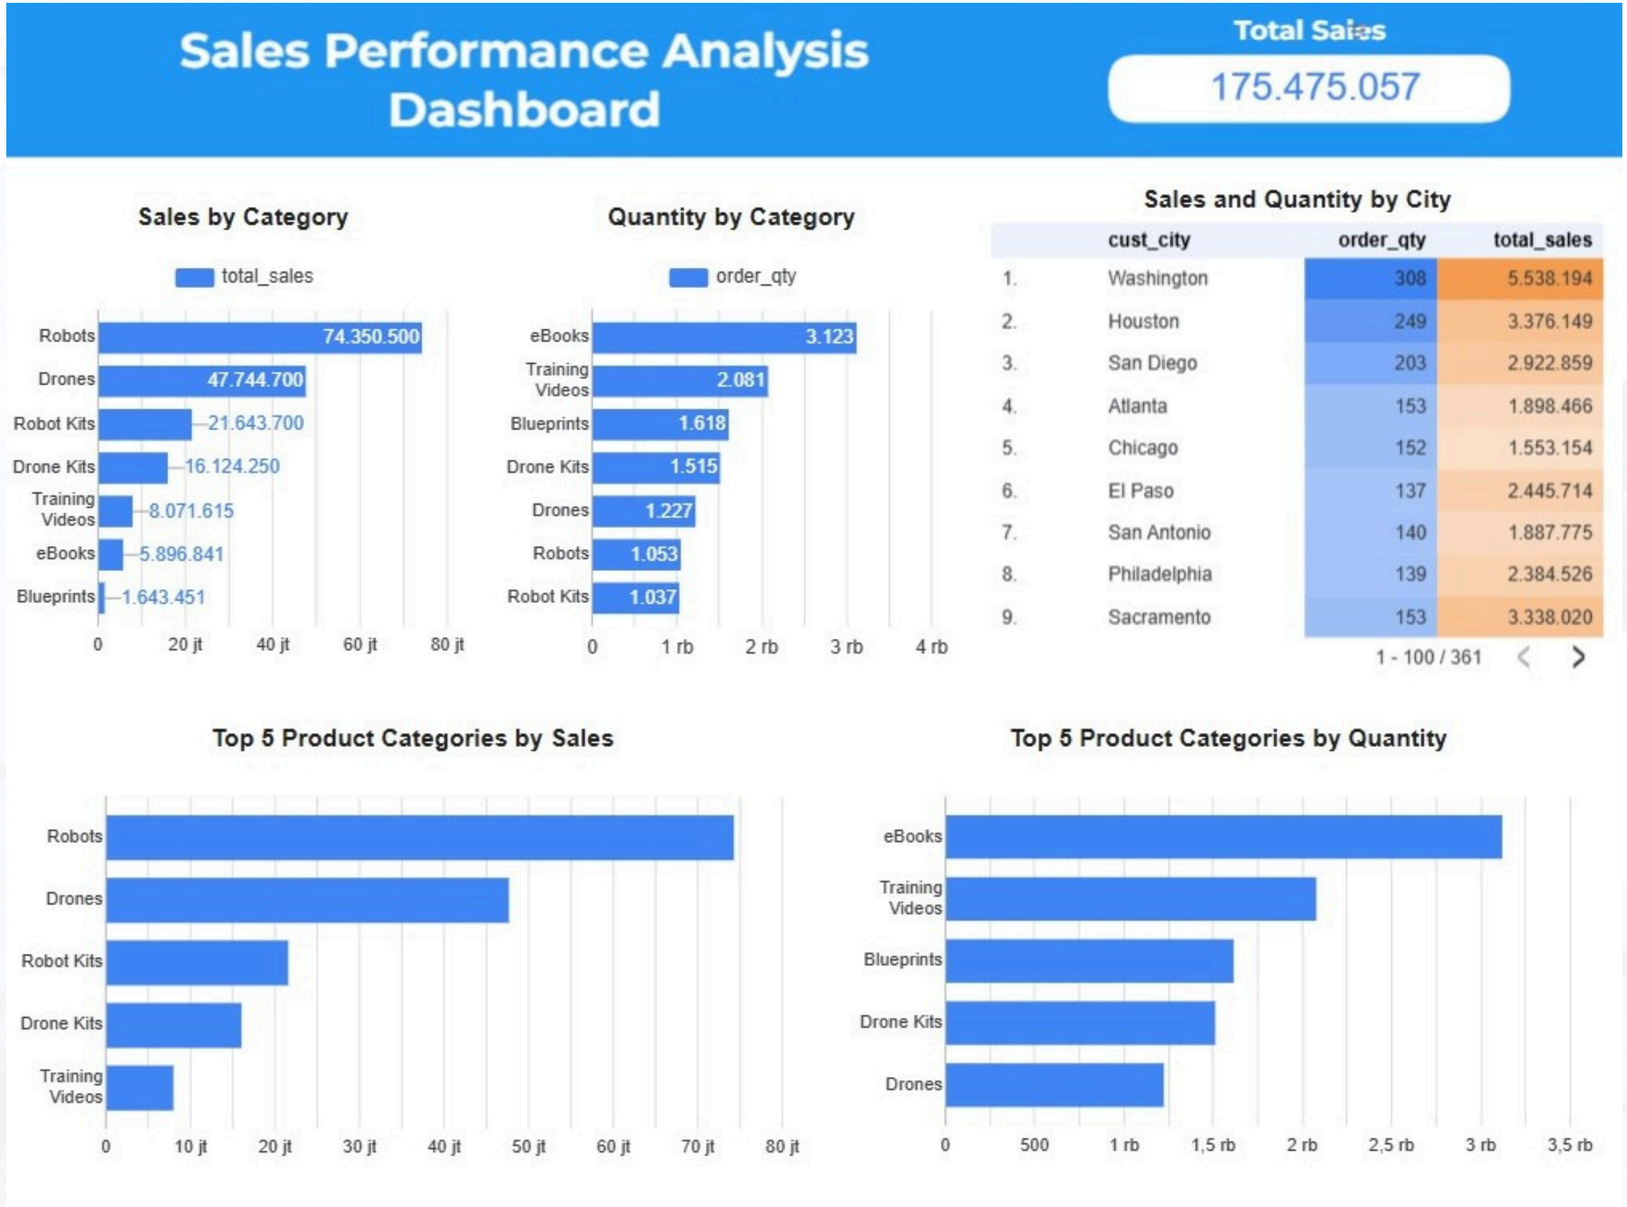

I used SQL JOINs to connect the tables based on their related key columns, selected the required fields, and created a calculated field for Total Sales using order quantity multiplied by product price. The final dataset was then sorted by transaction date and used as the main source for further analysis and visualization in Looker Studio.

```sql
SELECT
      o.Date AS order_date,
      pc.CategoryName AS category_name,
      p.ProdName AS products_name,
      p.Price AS products_price,
      o.Quantity AS order_qty,
      (o.Quantity * p.Price) AS total_sales,
      c.CustomerEmail AS cust_email,
      c.CustomerCity AS cust_city
FROM bank_muamalat.orders o
JOIN bank_muamalat.customers c ON o.CustomerID = c.CustomerID
JOIN bank_muamalat.products p ON o.ProdNumber = p.ProdNumber
JOIN bank_muamalat.productcategory pc ON p.Category = pc.CategoryID
ORDER BY o.Date ASC;
```

Visualization

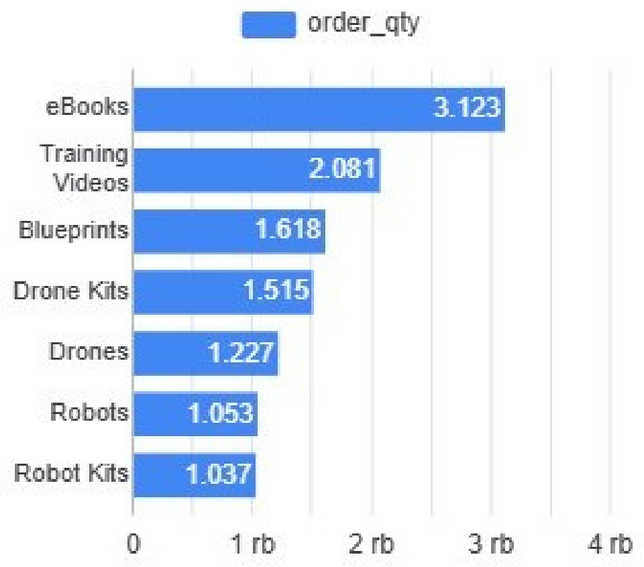

Rakamin Academy

Sales by Category

Robots generated the highest sales at 74.35M, followed by Drones at 47.74M. This indicates that higher-value product categories are the main contributors to overall revenue, making them important categories to maintain and prioritize.

Quantity by Category

eBooks recorded the highest sales volume with 3,123 units sold, while Robots generated the highest revenue despite a lower sales volume. This suggests that product price plays an important role in revenue contribution, with high-volume products and high-value products serving different business opportunities.

Sales and Quantity by City

	cust_city	order_qty	total_sales
1.	Washington	308	5.538.194
2.	Houston	249	3.376.149
3.	San Diego	203	2.922.859
4.	Atlanta	153	1.898.466
5.	Chicago	152	1.553.154
6.	El Paso	137	2.445.714
7.	San Antonio	140	1.887.775
8.	Philadelphia	139	2.384.526
9.	Sacramento	153	3.338.020

1 - 100 / 361

Washington recorded the highest performance among the displayed cities, with 308 units sold and 5.54M in sales. This indicates stronger customer demand in the area and provides an opportunity to prioritize regional marketing and sales activities in high-performing locations.

Insights &
Strategic Recommendations

Rakamin Academy

Key Insights

Robots are the main revenue driver, generating the highest sales at 74.35M.

eBooks are the main volume driver, with 3.123 units sold.

Washington shows the strongest performance, recording 5.54M in sales with 308 units sold.

Strategic Recommendations

Prioritize high-value categories such as Robots and Drones through targeted promotions, product bundling, and inventory availability to maintain their revenue contribution.

Leverage high-volume categories such as eBooks and Training Videos for cross-selling opportunities with higher-value products.

Strengthen high-performing regions such as Washington while analyzing lower-performing cities to identify potential gaps in customer demand, promotion, or product availability.

Conclusion

- The analysis shows that sales performance is driven by different factors across product categories and regions. Robots generated the highest revenue, while eBooks recorded the highest sales volume, highlighting the difference between revenue-driving and volume-driving products.

- Regional analysis also shows that some cities contribute more strongly to overall performance, indicating opportunities for more targeted sales and marketing strategies.

- By combining sales, product, quantity, and geographic insights, the company can make more informed decisions to maintain strong-performing segments, identify growth opportunities, and improve overall sales performance.

Thank You
